ASSEMBLYAI VOICE AGENT HACKATHON 2026

Ask out loud. Wispy shows you how.

A voice agent that does not just talk back. It hears you in real time with AssemblyAI, flies to the right button on your screen, circles it, and walks you through each step.

Hears · Points · Draws · Explains · Asks first

By **Hausor Labs** · Nairobi, Kenya

wispy

THE PROBLEM

Voice agents can talk. They cannot show you where to click.

When someone is stuck inside software, a spoken paragraph is not enough. They need to see the next step on their own screen.

Help lives somewhere else

A manual, a help centre or a chatbot, never on the screen where the person is stuck.

Support calls pile up

"Where do I click?" becomes a ticket or a call the screen itself could have answered.

Staff learn slowly

New hires spend weeks learning internal tools. Every system change means relearning.

Typing is a barrier

Many people would rather say what they want, in their own words and language, than type it.

wispy

THE SOLUTION

A voice agent with a body on your screen.

Hold a key and speak. Wispy types your words as you say them, looks at the screen, then flies to the answer and talks you through it.

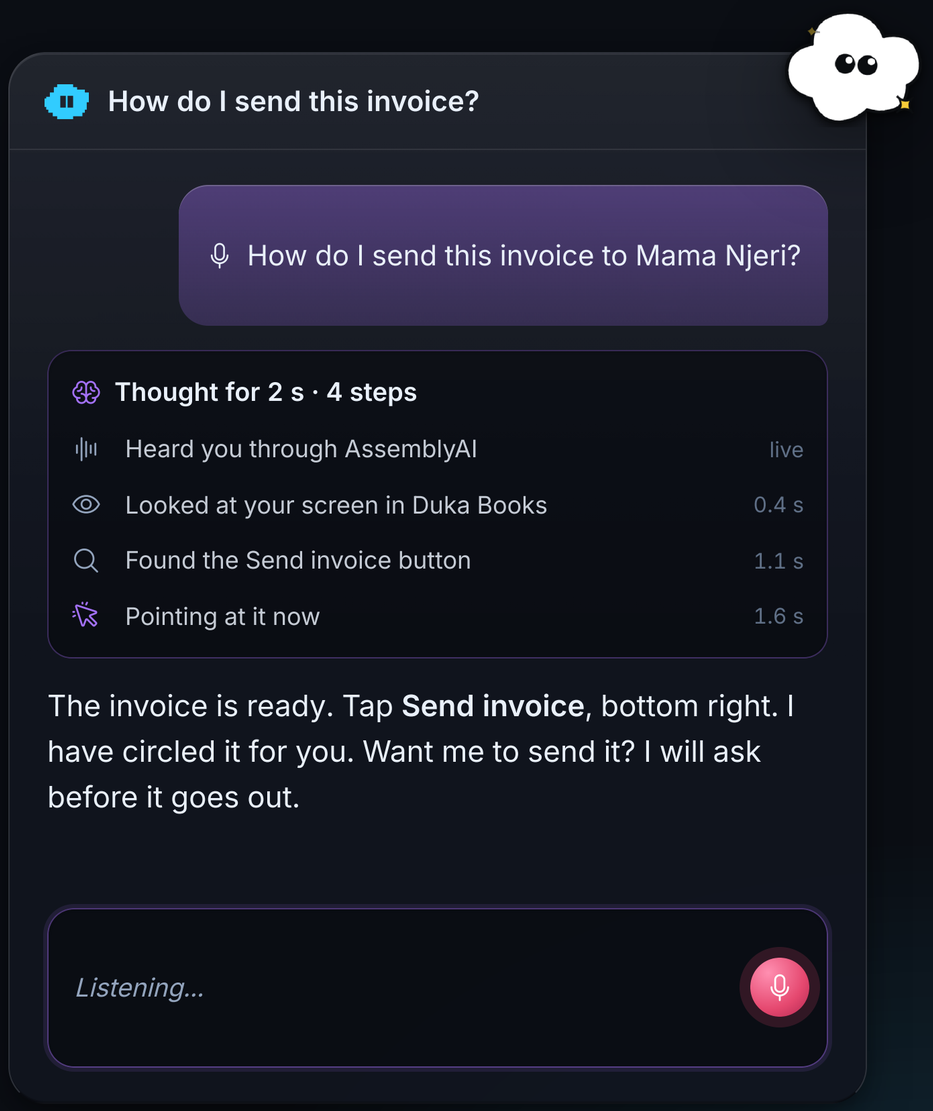

Hears you live
AssemblyAI real-time speech-to-text, words appear as you speak.

Sees the screen
Reads the window, page structure and screenshot you are on.

Points and draws
The mascot lands on the exact control and rings it.

Explains out loud
A natural voice with word-by-word captions.

Asks before it acts
It can finish the task, and stops before anything important.

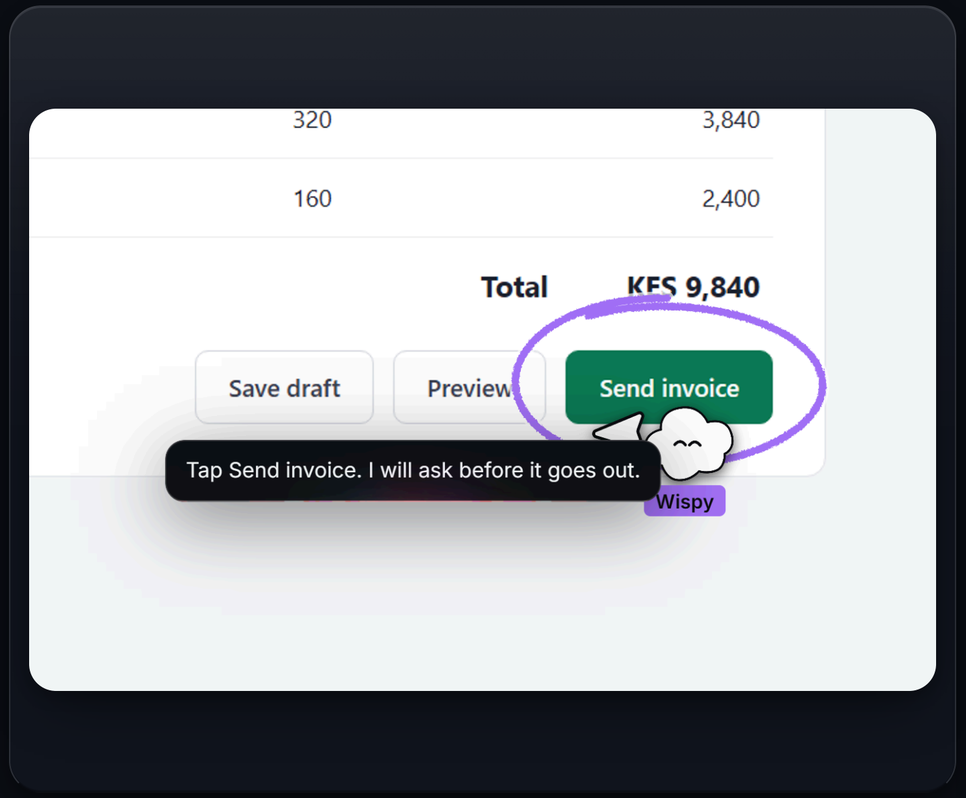

The panel is an illustration of one turn. Slide 4 shows real captures.

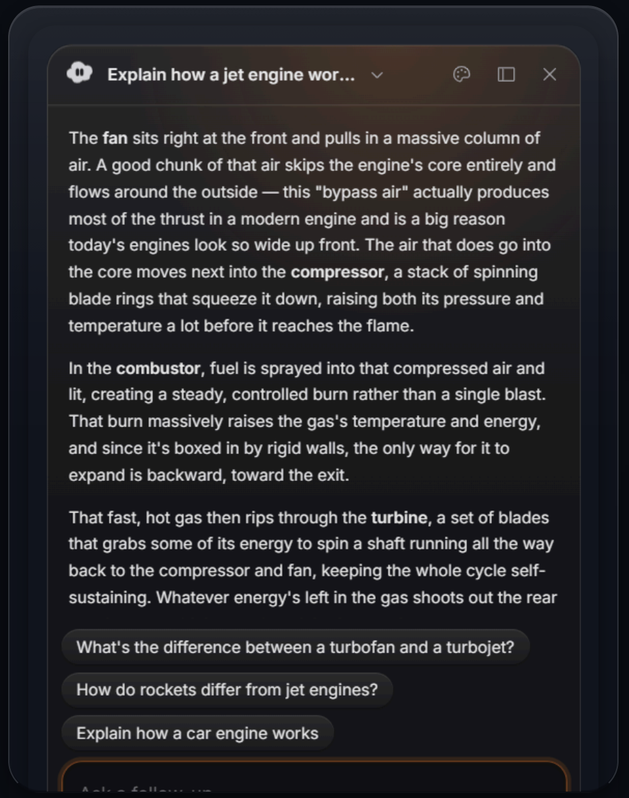

wispy

PRODUCT PROOF

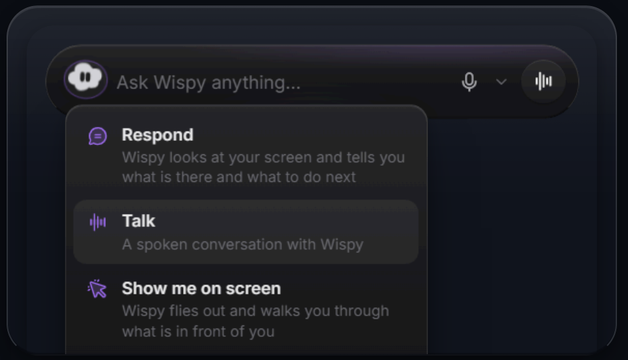

It runs today. Real captures from the desktop app.

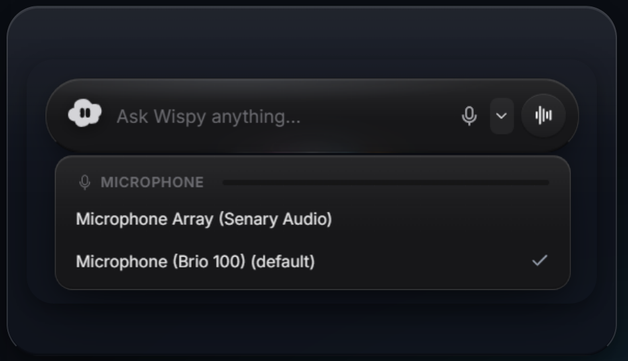

Wispy points and circles. The live pointer on a sample invoicing screen.

Spoken answers with follow-up questions.

Tap the mascot: respond, talk, show me.

Voice first: pick a mic and hold to talk.

wispy

BUILT ON ASSEMBLYAI

AssemblyAI is how Wispy hears you.

Realtime Speech-to-Text is the first link in every voice turn. We bring our own orchestration, brain and voice on top of it.

Mic

Hold to talk. 16 kHz, 16-bit PCM streamed as you speak.

AssemblyAI Streaming v3

Universal-3.5 Pro over WebSocket. Live partials typed into the panel. Key terms boosted, so names are spelled right.

Brain

Reads the screen and plans each step: where to point, what to draw, what to say.

Mascot and voice

Flies, rings, draws. Speaks with word-by-word captions.

0.4 s

From "stop" to text

Final words 0.34 to 0.42 s after the person lets go, using ForceEndpoint then Terminate.

0 ms

Mic never waits

The socket opens beside the recording, so nothing said during the handshake is lost.

Exact

Screen words boosted

Button and menu names from the app in front join the key terms mid-turn. "Mama Njeri" was "Mama Injury" without a boost.

Measured on 28 Sept 2026 against the live AssemblyAI API, with synthesized speech streamed in real time. If the stream drops, a fallback engine writes the same recording down.

wispy

BUILT FOR TRUST

An agent that can see your screen has to earn trust.

Asks before it acts

Submit, pay and delete wait for your yes. A person stays in control.

Masked on the device

Phone, card, account and ID numbers, amounts and passwords are hidden before any prompt leaves.

Shows its reasoning

Every answer lists the steps Wispy took and the sources it used, with timings.

You see what it heard

Live AssemblyAI partials show the words before Wispy acts on them.

Listens only when asked

Hold a key to talk. Wispy is not listening the rest of the time.

Any model

Llama, Claude and others behind one brain, so a company can pick a private model.

wispy

WHAT IS NEW

Most voice agents answer. Wispy shows.

	PHONE OR CHAT VOICE AGENT	SCREEN-SHARE SUPPORT	WISPY AI
Hears you in real time	✓	✓	✓
Sees your screen	No	✓	✓
Points and draws on the exact control	No	A person does it	✓
Available the moment you are stuck	✓	Wait for an agent	✓
Works in any program, not one website	No	✓	✓
A mascot with faces and personality	No	No	✓

wispy

BUSINESS VALUE

Companies pay for people getting unstuck.

THE MARKET

US$0.9B to 3.8B
Digital adoption platforms, 2025
In-app guidance. Analysts differ on size; most forecast about 18% a year.

US$12.1B to 47.8B
AI for customer service, 2024 to 2030
MarketsandMarkets, 25.8% a year.

US$1.5B
SAP bought WalkMe, 2024
Large software companies pay for in-app guidance.

WHO PAYS (PLANNED)

Software companies
Embed Wispy in their product. Fewer tickets, faster onboarding.

Employers
Per-seat Wispy for Desktop to train staff on internal tools.

Banks and government
Private deployment on their own servers.

15 enterprise companies have expressed interest in putting Wispy inside their software.

WHAT HE HAS WON

Champion, 1st of 19
and Delight award. Gleam, a screen buddy, Claude Fable 5.1 Build Day, Nairobi, 2026

3rd globally, US$20,000
Rovify, Base Batches 001, 2025. 1,200+ entries. Africa round winner

Qdrant

1st, Qdrant track
PayStream, AI Genesis, Dubai, 2025

Oryn

3rd place
Oryn, AI Mashinani, Kenya, 2026

IGAD ICPAC

Top 10
Cascade Bridge drought forecasting, IGAD ICPAC hackathon, 2026

KSA

Software Engineer
Kenya Space Agency, AIMS crop monitoring, 2025

wispy

WHAT IS NEXT

From a desktop buddy to every screen.

Roadmap · 3 steps

NEXT

Wispy for Web: add the voice guide to any website with one line of code.

THEN

Wispy Studio: a company teaches a workflow once, and sees where people get stuck.

AFTER

First paid pilots with companies from our interest list.

What a prize would fund

AssemblyAI credits for pilot traffic, and hosting for the first Wispy for Web customers.

Try it

Watch the demo video in this submission. The desktop build is shared with judges on request.
